

Tutor for Human-Robot Interaction seminar

HiWi

We are seeking a tutor (m/f/x) for our interdisciplinary seminar “Human-Robot Interaction” for the Winter Term 2025/26.

In this seminar, students explore various application areas of human-robot interaction (HRI). Working in teams, they prepare and lead seminar sessions on specific topics, such as “HRI in Healthcare”. Each session involves a presentation by the student group, followed by a guided discussion. Some sessions may also include a hands-on workshop involving a robotic system.

Given the tight timeline of the academic semester, your job would be to support student teams by offering help in setting up and using robotic systems and assisting with organizational matters.

Prerequisites:

- Motivated to assist students in overcoming technical setup challenges.
- Experience with programming languages such as Python and robotics software environments such as ROS is a plus.
- Experience with platforms used in hobbyist robotics is a plus.
